## Student ID:

# EHB205E Introduction to Logic Design Quiz 2 

Duration: 45 Minutes
Grading: 1) 40\%, 2) 60\%,
Quiz is in closed-notes and closed-books format
For your answers please use the space provided in the exam sheet GOOD LUCK!

1. Implement a 4 -variable Boolean function $\boldsymbol{f}\left(\boldsymbol{x}_{\mathbf{1}}, \boldsymbol{x}_{\mathbf{2}}, \boldsymbol{x}_{\mathbf{3}}, \boldsymbol{x}_{\mathbf{4}}\right)=\sum(2,4,5,7,8,9,11,13,15)$ using a single 4-to-1 multiplexer and minimal number of two-input NOR gates. Use $\boldsymbol{x}_{\mathbf{1}}$ and $\boldsymbol{x}_{\mathbf{2}}$ as select input lines in the multiplexer. Use only variables $x_{1}, x_{2}, x_{3}, x_{4}$ as inputs (not their negated forms).
2. Consider a sequential circuit shown below. It has three input $A, B$, and CLK and two outputs $X$ and Y. Obtain its truth table, and Boolean expressions for X and Y .
