# EHB 205E: Introduction to Logic Design <br> Quiz 1 

Duration: 45 Minutes
Grading: 1) $20 \%$, 2) $40 \%$, 3) $40 \%$,
Quiz is in closed-notes and closed-books format
For your answers please use the space provided in the exam sheet
GOOD LUCK!

1. Answer the following statements with T (true) or F (false) only.
(do not guess: points are deducted for wrong answers. If you do not know the answer, leave it blank)
a) $\qquad$ Finite decimal fraction can be always converted to finite binary fraction
b) $\qquad$ Finite hexadecimal fraction can be always converted to finite binary fraction
c) $\qquad$ (The population of Burundi was below 1 million in 2013) NAND (banana is tastier than apple)
d) ___ A circuit performing a binary addition of two $n$-bit numbers needs $n$ outputs.
e) $\qquad$ A circuit performing a binary multiplication of two $n$-bit numbers needs $2 n$ outputs.
2. Consider a 4 -variable Boolean function $\boldsymbol{f}\left(\boldsymbol{x}_{\mathbf{1}}, \boldsymbol{x}_{\mathbf{2}}, \boldsymbol{x}_{\mathbf{3}}, \boldsymbol{x}_{\mathbf{4}}\right)=\sum(1,3,4,5,9,11,12,13,14,15) ; \boldsymbol{x}_{\mathbf{1}}$ is the most significant bit. Obtain a minimal sum-of-products (SOP) expression for $f$ using a Karnaugh map. Show all prime and essential prime implicants.
3. Obtain a minimal sum-of-products (SOP) expression for $\boldsymbol{f}$ using a Karnaugh map.

$$
f=\frac{1}{x_{1} \overline{x_{2}} \overline{x_{3}}+x_{1} \overline{x_{2}} \overline{\overline{x_{4}}}+\overline{x_{1}} x_{2} x_{3} \overline{\overline{x_{4}}}+\overline{x_{1}} x_{2} \overline{x_{3}} x_{4}}
$$
